

## Most Similar Systems Design

The goal in this exercise is to identify the cause of a particular phenomenon by comparing two cases. Fill in the template as appropriate with values for the variables. If you identify more than four independent variables that you think are important, add extra rows to the template.

Subject of Comparison (for example, "Wealth")			
	Nation-state 1		Nation-state 2
Possible Cause: Independent Variable 1	value	=	value
Possible Cause: Independent Variable 2	value	=	value
Possible Cause: Independent Variable 3	value	=	value
Possible Cause: Independent Variable 4	value	≠	value
Dependent Variable	Effect X	≠	Effect Y
